## MISSION STATEMENT

Information about your customers, suppliers, and operations is critical to the success of any business. Information Technology is how this critical information moves through your business.

At Kunkle Consulting, we help with the management and direction of your IT staff and resources—as well as the protection of your information—so the people in your organization connect to the information they need to make your business successful. We help you make the most of your IT investment by providing quality service for a fair price.

Kunkle Consulting offers services that help with: **Strategic IT Planning, Software Selection, IT Regulations, IT Audit Preparation, and Data Analysis.**

## MEET THE OWNER

JR Kunkle not only has experience as the head of IT for a Fortune 1000 company, but he also worked for a “Big 4” consulting firm in its IT risk management practice. He has worked in IT or finance functions for over 20 years. Earning his MBA in 1999, JR has an extensive background marrying IT with business goals and objectives.

## OUR SERVICES\*

### Strategic IT Planning

Align IT with business goals with plans for:

- Executive summary of the company's major business objectives and information needs
- Scope of business applications and supported business areas
- Hardware and network infrastructure
- IT principles, metrics, and staffing model
- Current and future IT spend with comparison to benchmark data

### Software Selection

Help prepare for a software investment by:

- Creating and identifying critical business requirements
- Preparing request for information for vendors
- Developing “demo script” and set up software demonstrations
- Reviewing vendor financial situation and conducting user reference visits
- Negotiating the price and scope of implementation

## IT Regulation Consulting

Understand which regulations apply to your business with the creation of a detailed list of IT Policies & Procedures tailored for your environment, such as:

- User accounts and passwords
- Antivirus and antispyware software
- Software installation and use
- Application, computer, network monitoring
- E-mail & Internet access and use policy
- Computer security incident reporting
- Testing and documentation standards
- System modifications and program change control
- Backup and disaster recovery procedures
- Database, systems software support & network support

## IT Audit Preparation

IT control design for:

- Organizational security
- Asset classification and control
- Access control
- System development and maintenance
- Business continuity management

## Data Analysis

Design and develop tools for ongoing analysis of:

- General ledger
- Purchasing and accounts payable
- Order entry, billing, and accounts receivable
- Inventory management and control
- Industry specific transactions
